Cloud ?

→ Analogy :-

Think of electricity.

i- On Permises :-

You buy your own generator, fuel it, and repair it. Expensive and every breakdown is your problem.

ii- Cloud :-

You take Connection from the electricity Company and pay only for what to use.

=> You take Aws Servers, database Over the Internet on rent. You pay as you go.

6 Benefits of Aws :-

- No upfront Cost, you pay only for usage.

Scanned with CamScanner

- Lower cost per unit, because AWS buys at huge scale.
- No guessing capacity, AWS scale up and down when needed.
- Speed, a server is ready in time.
- No running of Data Centers, AWS handles that
- Go global in minutes.

Regions, Availability zones, Edge Loc:

Region: A city where bank operates Each city is a seprate geographic region.

Availability zone :-

A seprate building in that city, each with its own power, cooling and network. Every region has at least 3 AZs.

Scanned with CamScanner

Why this matters?

High Availability :-

If One Availability zone (AZ) has fire or power cut, your app keep running in another AZ, So you Spread your app across multiple AZs.

Disaster Recovery :-

For bigger protection, use multiple Regions.

Low Latency :

Pick a region close to your user.

Compilance :

Data Stays in the region you choose Aws never moves unless you do. Some Countries law require data Stays in Same Country.
